SUMMARY

Senior Product Engineer with 8+ years building scalable SaaS and fintech applications using React, TypeScript, and Next.js. Experienced in **scalable frontend architecture, real-time systems, microservice-integrated applications, performance optimization, and AI-assisted engineering workflows**. Strong track record of reducing bundle size, optimizing API-heavy applications, and delivering intuitive product experiences in fast-moving **Agile/Scrum teams**. Comfortable collaborating across frontend, backend, platform, and product systems throughout the **full software development lifecycle** including design, implementation, testing, CI/CD, optimization, and production support.

TECHNICAL SKILLS

Frontend: JavaScript (ES6+), HTML, CSS, TypeScript, React.js, Next.js, Browser APIs, DOM manipulation, Event handling

State Management / Data: React Query, Redux, Recoil

UI / Styling: Vanilla Extract, Material UI, Ant Design, Stitches UI, Bootstrap

Backend / APIs: Node.js, REST APIs, API contract design, configuration-driven architectures, API integration, microservice-based architectures, Docker, Kubernetes (working familiarity)

Build / Tooling: Vite, Webpack, Babel, ESLint, Husky, Git, GitHub, Jenkins

Testing: Jest, React Testing Library, Playwright, Vite test workflows

Performance: Code splitting, lazy loading, tree-shaking, bundle optimization, Core Web Vitals, LCP/FCP tuning, Efficient rendering, state optimization

Web / Realtime: WebSockets, WebRTC, Service Workers, PWA, Mediapipe

AI Workflows: Cursor, GitHub Copilot, Ollama, Qwen, Bedrock APIs, AI-assisted test generation, ClickUp-integrated dev workflows

Architecture: Component-driven design, scalable frontend architecture, configuration-driven systems

EXPERIENCE

Unosecure (SaaS Security Platform)

Oct 2025 – Present

Senior Software Engineer

- Built and delivered **frontend for a SaaS platform redesign, creating reusable UI components and dynamic, data-driven interfaces** using JavaScript, React, and Vanilla Extract with focus on performance and maintainability.
- Collaborated on **backend schema design and implemented configuration-driven form rendering systems** for connector integrations, enabling rapid onboarding of new integrations with minimal frontend changes.
- Collaborated closely with backend teams working on **microservice-based systems** to improve API contracts, frontend integration reliability, and release stability.
- Handled secure API interactions and data flows in the frontend, ensuring safe handling of user inputs and responses
- Built **lightweight, data-driven UI features using vanilla JavaScript and DOM APIs** for performance-critical workflows.
- Reduced bundle size from **16MB to 6MB (~62.5%)** through dependency cleanup, tree-shaking, code splitting, lazy loading, and build optimizations, improving load performance and responsiveness
- Standardized **Vite build configuration**, including environment handling, aliases, and chunking strategy, for faster builds and more consistent releases.

- Implemented **Service Worker caching** to improve repeat-visit performance and resilience on slow or unstable networks.
- Integrated **Jenkins CI/CD** pipelines to improve release repeatability and reliability.
- Participated across the **full software development lifecycle including feature design, implementation, testing, CI/CD automation, performance optimization**, and production support.
- Introduced performance regression guardrails in CI using **bundle analysis and Lighthouse thresholds**.
- Used **AI-assisted engineering workflows (Cursor, Copilot)** for implementation, debugging, testing, refactoring, and development acceleration.

Compliance Innovation (Fintech + KYC Platform)

May 2023 – Sep 2025

Tech Lead (FrontEnd)/ Senior Software Engineer

- Engineered real-time trading([Liquidity.io](#)) workflows using **React Query + WebSocket + smart polling**, improving **data synchronization and reducing API traffic by 40%**
- Built facial authentication for ([Simplici.io](#)) KYC using **React + TypeScript + Recoil + Mediapipe/WebRTC**, reducing manual KYC time by **50%** and improving conversion.
- Led and mentored a **7-member team**, improving delivery velocity by **20%** through review rigor and execution practices.
- Spearheaded **Webpack optimization**, reducing bundle size by **40%** and improving **Core Web Vitals (LCP/FCP)**.
- Developed **framework-agnostic Web Components** enabling biometric flows across **Angular/Vue/Vanilla JS** consumers.
- Strengthened reliability with robust **device/browser fallbacks + testing discipline (Jest/RTL, ESLint/Prettier)**.
- Improved engineering quality through automated testing workflows, CI validation pipelines, and regression prevention practices.
- Worked with backend APIs to manage asynchronous data flows, error handling, and state consistency across complex user workflows

91Squarefeet (YC-funded PropTech startup)

Sep 2022 – Apr 2023

Senior Software Engineer

- Developed a custom **commenting system and rich text box** with mention support and file uploads using React, Redux, TypeScript, and Material UI.
- Migrated complex UI modules from **jQuery to React**, significantly improving performance, maintainability, and code structure.
- Built dynamic UI components using advanced DOM manipulation techniques during legacy system support.
- Contributed to frontend features of **R Dash**, a retail expansion platform, ensuring modular code and consistent UX.

Pharmeasy (Healthcare E-commerce)

March 2022 – Sep 2022

Senior Software Engineer

- Contributed to the **homepage revamp** of [Pharmeasy.in](#), building high-performance, reusable components with **React, Redux, Next.js, TypeScript**, and **Stitches UI**.
- Focused on optimizing rendering paths, reducing visual load time, and improving UX consistency across web and mobile breakpoints.

GIEOM Labs (Enterprise Compliance Platform)

Feb 2020 – Feb 2022

Software Engineer

- Developed responsive dashboards and form interfaces for **Risk Central**, a compliance and risk management platform.
- Built and maintained dynamic forms using **FormBuilder, DevExpress**, jQuery, and custom logic to support business workflows.
- Used Ant Design and Bootstrap to deliver highly interactive and accessible UI components

Incture Technologies (Enterprise Solutions)

Jan 2019– Jan 2020

Associate Consultant (UI Developer)

- Contributed to frontend modules of the **Talent Supply Management System**, translating client specifications into functional UI components.
- Focused on UI enhancements and bug fixes to improve system usability and efficiency.

EDUCATION

Dr. B.R. Ambedkar University Agra(*Bachelor of Engineering (B.E.), Computer Science*)

UP, India
